## EDUCATION

### B.Tech in Computer Science and Business Systems

*Expected: May 2027*

Sri Manakula Vinayagar Engineering College

## PROFESSIONAL SUMMARY

Computer Science and Business Systems undergraduate with hands-on experience building full-stack web applications, REST APIs, and machine learning systems. Proficient in Python, TypeScript, React, Next.js, Flask, and PostgreSQL. Completed a software development internship involving real-world ML deployment and backend API integration. Currently building two independent open-source and SaaS projects. Seeking a software development internship to contribute to engineering teams and continue growing.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, SQL, C/C++

**Frameworks & Libraries:** React.js, Next.js, Flask, REST APIs

**Databases:** PostgreSQL, MySQL, Supabase, Firebase

**Tools & Platforms:** Git, GitHub, Docker, Vercel, Railway, Resend

## EXPERIENCE

### Software Development Intern — linvsys

*June 2025 – August 2025*

- Developed an AI-powered Air Filter Prediction System using time-series forecasting with the TSMixer architecture, covering the full pipeline from data preprocessing and feature engineering to model training and production deployment.
- Built Flask REST APIs for real-time prediction services, enabling seamless integration with external applications and monitoring dashboards.
- Created web-based interfaces for visualizing prediction outputs, improving usability for end users and operational teams.
- Collaborated with team members to optimize model performance and system scalability, participating in testing, debugging, and production deployment cycles.

## PROJECTS

### GymDesk — Gym Management SaaS Platform *Next.js, TypeScript, PostgreSQL, Supabase* [GitHub ↗](#)

- Building a multi-module SaaS platform for gym owners including member management, attendance tracking, subscription billing, and business analytics dashboards.
- Implemented secure authentication with role-based access control (RBAC) to manage different user permission levels.
- Designing a scalable multi-tenant architecture to support future growth and onboarding of multiple gym clients.

### LightBase — Open Source Backend Platform *TypeScript, PostgreSQL, REST APIs* [GitHub ↗](#)

- Building a self-hostable, open-source backend platform inspired by Supabase, providing authentication, database management, and API services out of the box.
- Focused on keeping the system lightweight and extensible with a clean architecture designed to support community contributions and future feature expansion.

### Smart Career Guide — AI Resume & Job Matcher *Python, NLP* [GitHub ↗](#)

- Built an AI-powered platform that analyzes resumes against job descriptions using NLP techniques to generate personalized job recommendations and skill gap reports.
- Designed an intuitive user interface to make the tool accessible to users with varying technical backgrounds.

### Air Filter Prediction System *Python, Flask, TSMixer, Machine Learning* [GitHub ↗](#)

- Developed a machine learning system to predict AC air filter health using regression and classification pipelines built on the TSMixer architecture.
- Performed feature engineering, threshold tuning, and model optimization to improve prediction accuracy for predictive maintenance use cases.
- Deployed the system via Flask APIs to support real-time monitoring and industrial integration.
